

Disclaimer:

This project has received funding from the European Union's Horizon 2020 Research and Innovation programme under grant agreement No 815083.

Project details:

Duration: 1 Sep 2019 - 28 Feb 2023 Grant agreement: No: 815083

FLOATING WIND TECHNOLOGY

Coupled analysis and optimization strategies for FOWT mooring and dynamic cable design

COREWIND webinar 21st April 2020

corewind.eu

Caroline LOURIE JDR

Cost optimization of the offshore wind turbine mooring and cable systems

Configuration Design and Cost Drivers

Configuration Drivers	Mooring System	Cabling System		
Floater Type	YES	NO		
Connection points	YES	YES		
Metocean conditions	YES	YES		
Excursion limitations	YES	YES		
Water depth	YES	YES		
Marine Growth	YES	YES		
Fatigue	YES	YES		Current spring peak flow for West of Barra region
Bend / Torsion Limits	YES	YES		
Peak Loading	YES at Anchor	YES at TDP and FC		
Clashing Avoidance	YES	YES		Ez Ez
Seabed Movement	YES – limit disruption	YES – protect TDP		
Cost of Ancillaries	YES	YES		
Cost of Installation	YES	YES		and the second sec

Optimizing Systems – Mooring Configuration

Mooring configuration a complex trade-off, considering:

- Platform dynamics / associated turbine cost
- Complexity and costs of the anchoring system
- Environmental loading, marine growth, water depth
- Standard compliance and integrity of design

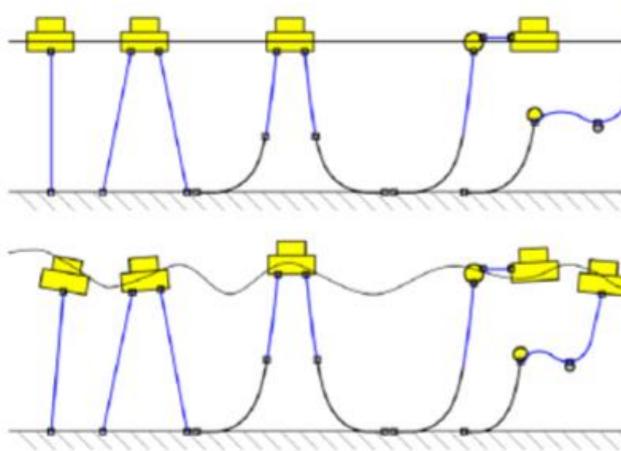

Catenary Mooring

- Long Steel Chains or Wires
- Impact to marine life chain near / resting on seabed
- Lower Anchor Costs.
- Larger Horizontal Movement

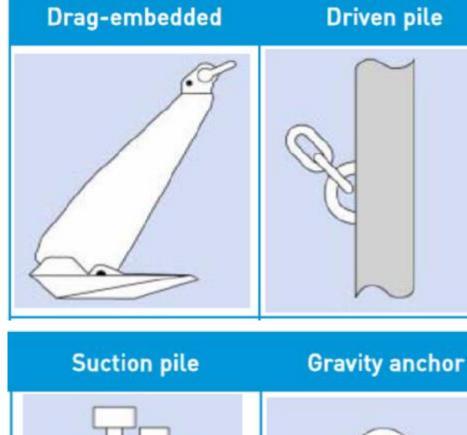

COST DRIVER TO DESIGN IS PRIMARILY MATERIAL COST OF MOORING COMPONENTS

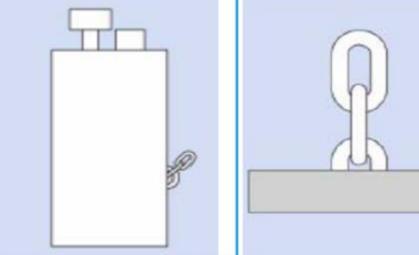

Taut Mooring

Synthetic Fibres or Wire Lower impact to marine life (lower footprint / seabed disruption) Large Anchor Costs as Higher Loads. Limited Horizontal Movement

Optimizing Systems – Cable Configuration

- **Platform excursions**

COST DRIVER TO CABLE CONFIGURATION IS PRIMARILY ANCILLARY HARDWARE COSTS

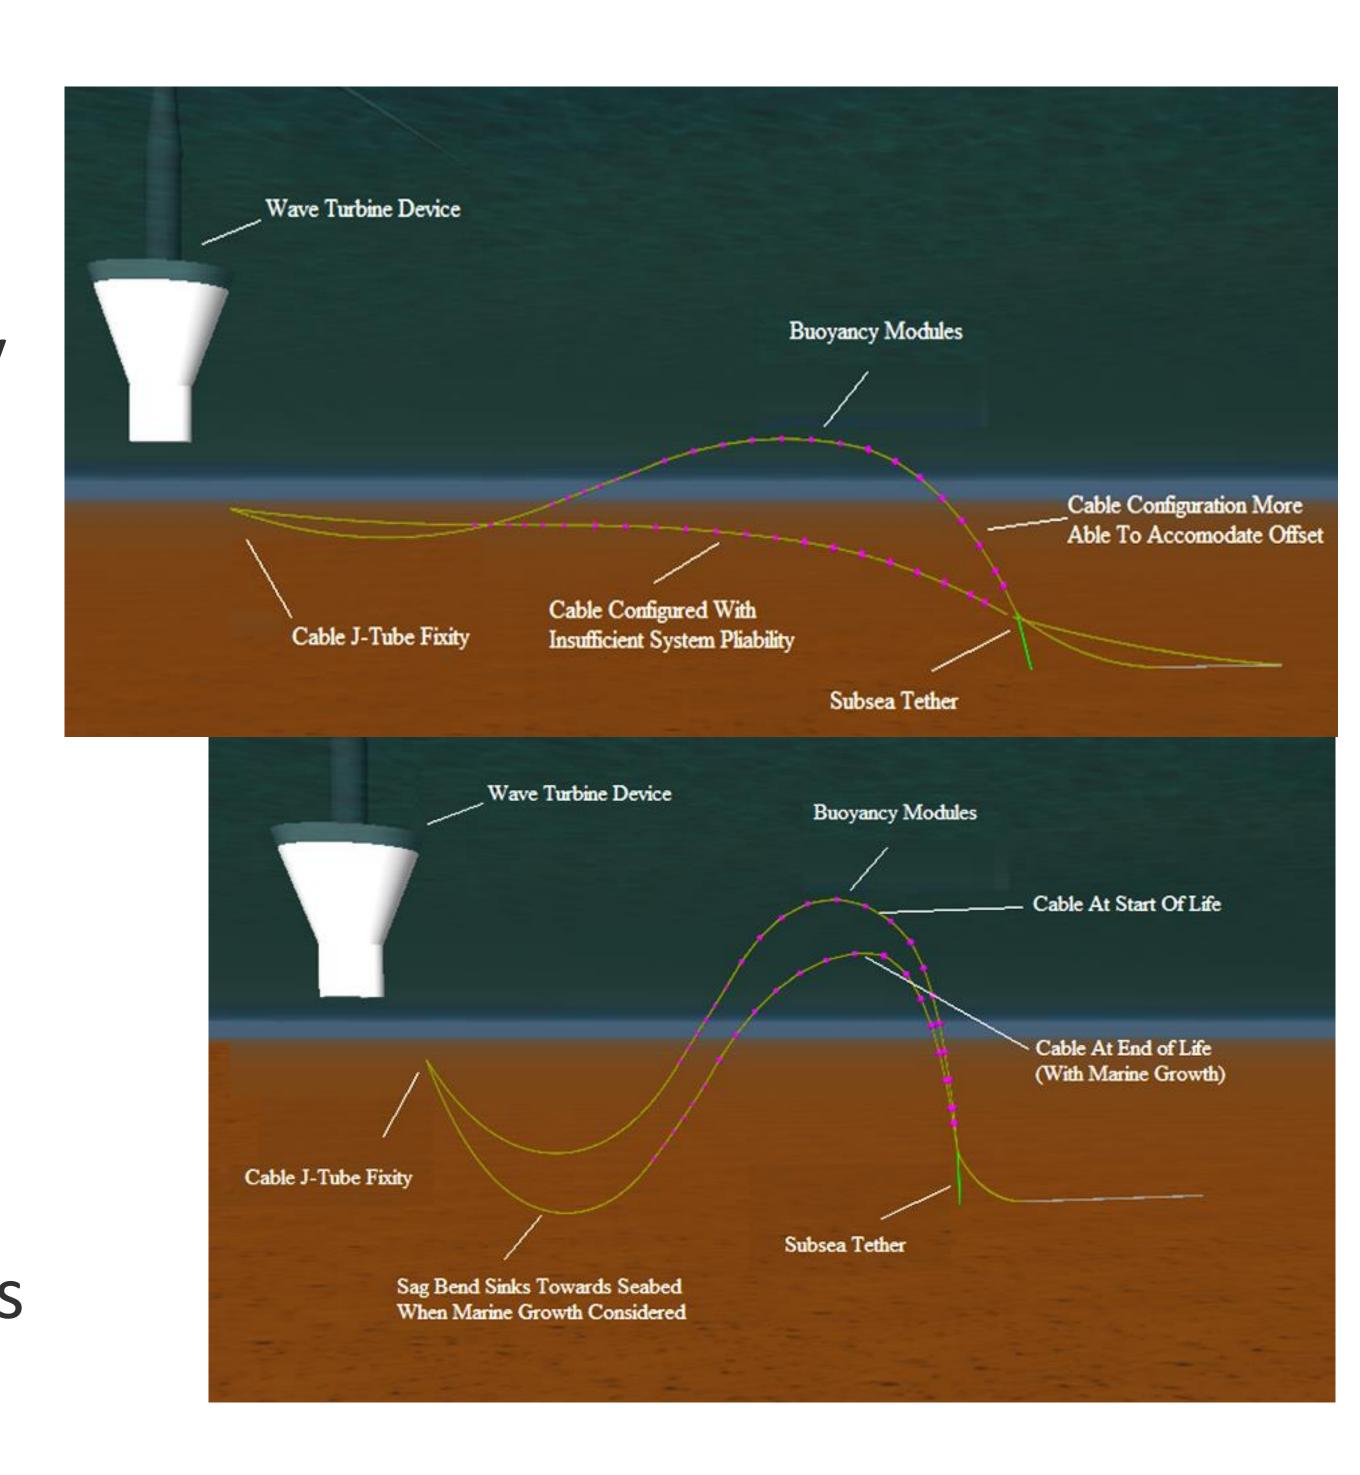

Cable Configuration Design Process

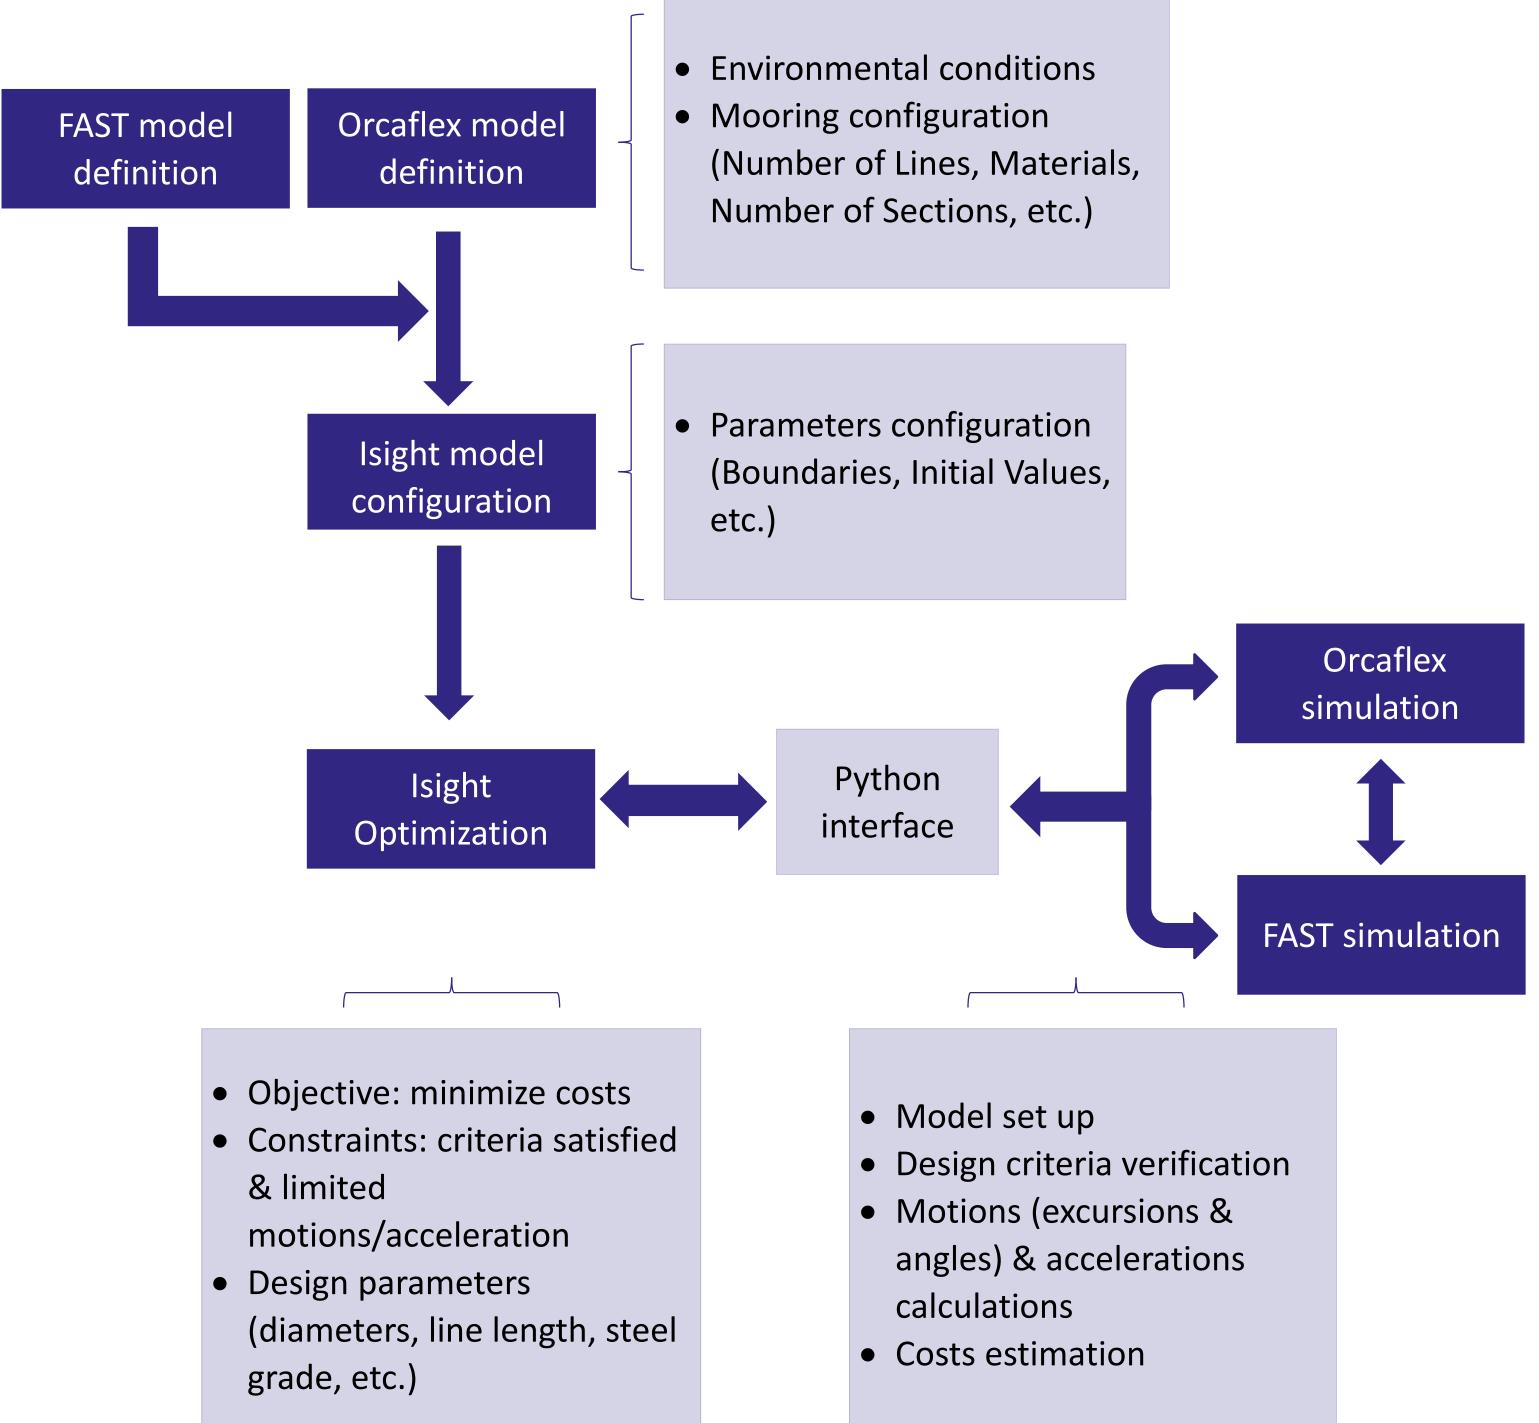

- Static configuration
 - Dynamic length
 - Positioning of buoyancy
 - Tether requirements
- ULS / ALS analysis
- Interference analysis
- Fatigue assessment
- Confirm
 - Cable design
 - Dynamic configuration
 - Ancillary hardware costs

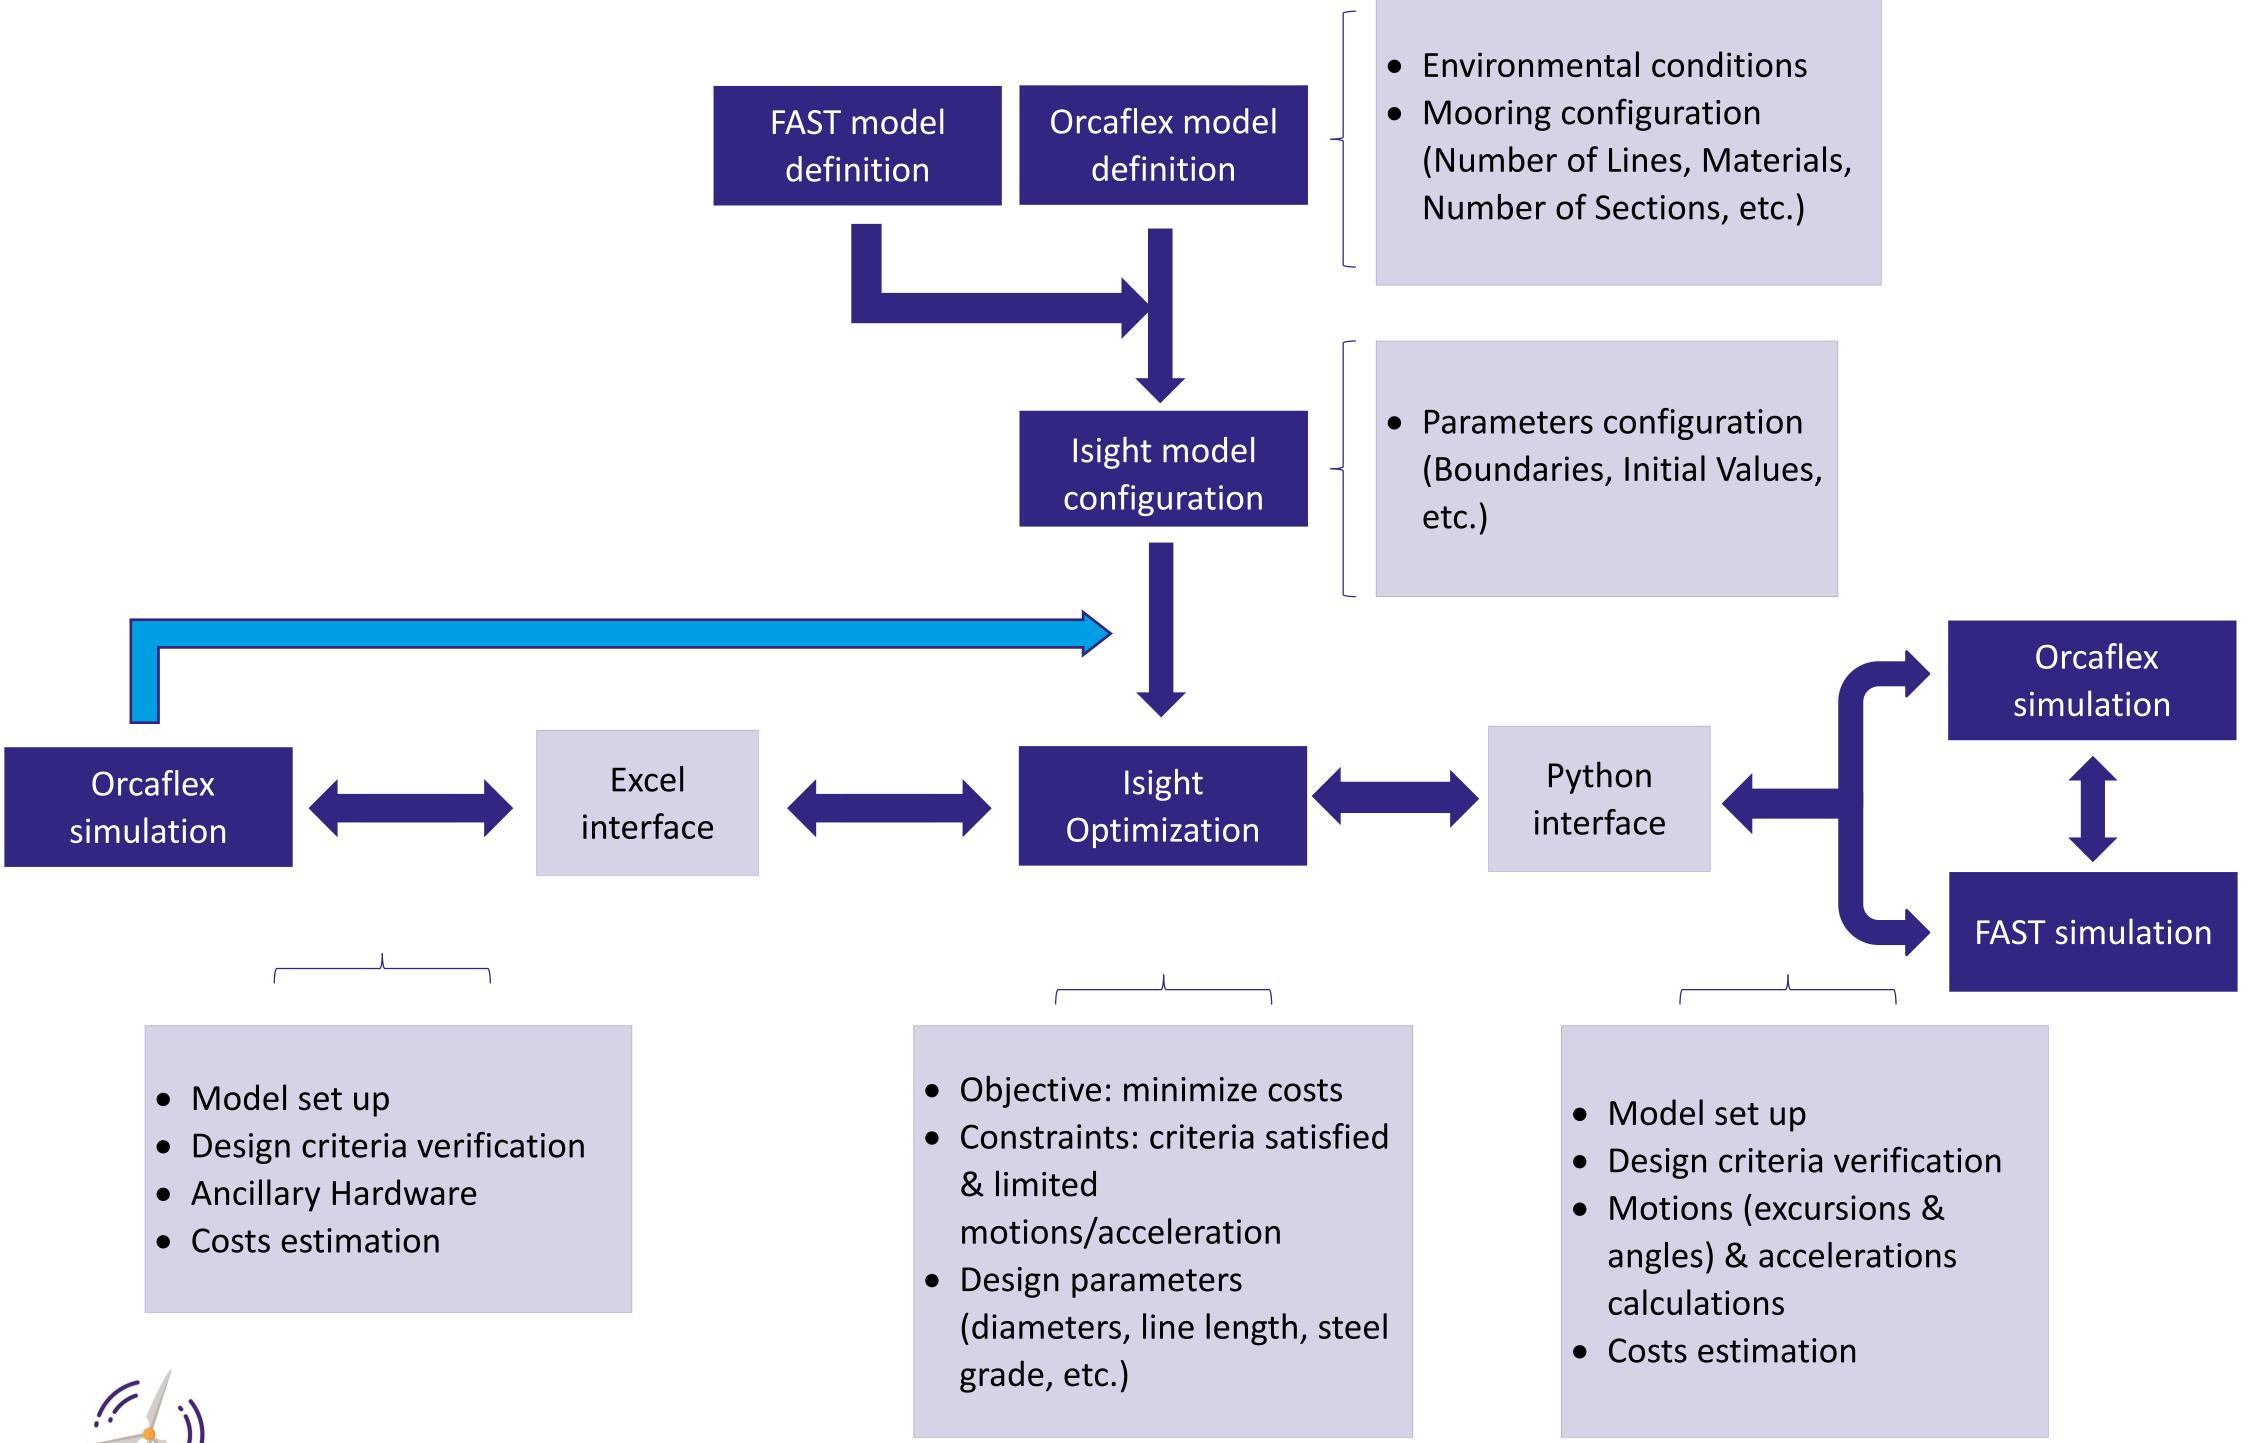

Mooring Design Optimization

Mooring & Cable Design Optimization

Optimization for Commercial Scale FOWF

- Optimisation of mooring and cable to reduce system cost
 - Larger mooring offset will increase cable ancillaries cost
 - Will be influenced by site and project requirements
- Considerations for commercial scale:
 - Economies of scale / standardisation
 - Shared systems e.g. anchoring, connection points
 - Innovations in materials and design philosophies
- And beyond...
 - Larger turbines; deeper waters; bigger challenges
 - Higher voltage dynamic cables
 - Innovative mooring and hardware solutions

Thanks for your attention
